\$11M (approximate)

DELIVERY MODEL

Design & Construct

Delivered as part of Transport for NSW's Transport Access Program, the Bankstown Station Upgrade improved accessibility, station functionality and interchange facilities. The project was delivered within a live operational rail environment and required careful staging, stakeholder coordination and ongoing management of customer interfaces throughout construction.

KEY OUTCOMES

- Delivered significant accessibility and interchange improvements as part of the Transport Access Program.
- Through a staged commissioning program new ticket gates and a new ticket office.
- Installed structural steel and glass canopy infrastructure to improve station amenity and weather protection.
- Enhanced station capacity and functionality to support future growth in the Bankstown transport network.
- Improved passenger circulation and customer flow throughout the station and interchange precinct.

CHALLENGES OVERCOME

- Delivered major infrastructure works above a live railway line.
- Maintained full station operations and customer access throughout construction.
- Managed extensive stakeholder and consultant interfaces during delivery.
- Successfully staged commissioning of new ticketing facilities while decommissioning temporary infrastructure.
- Delivered the upgrade within a complex brownfield rail environment with a heavy customer interface.
